

POTENTIAL DANGER FOR SULFUR PIT COVERS

Under no circumstances should a sulfur pit cover be used directly as a walkway or platform for maintenance access to the pit(s). Currently our sulfur pit covers display a stenciled/painted warning not to walk on these pit covers. Sulfur pit covers can become severely corroded over time due to the interaction of sulfur vapors and moisture; as such the structural integrity of the sulfur pit cover can be compromised making their use as a walkway or platform very dangerous. In addition, existing platforms in the sulfur handling area should be routinely inspected for integrity to insure they maintain their strength and can properly support the live and dead loads for which they were designed.

Please contact your MECS representative should you require assistance with your specific installation. Consultation will be provided at nominal and standard industrial rates.
